

ASX Announcement

19 October 2023

ABN: 45 116 153 514

ASX: TMX

Rare Earth Element (REE) Mineralisation Intersected across the Lort River project area

Terrain Minerals Limited (ASX: TMX) ('Terrain' or the 'Company') is pleased to inform shareholders that its first pass, reconnaissance scale air core drill program across its Lort River Project near Esperance in Western Australia has successfully intersected rare earth element (REE) mineralisation within a number of zones across the Company's (100% owned) 320 square kilometre tenement package.

Remarkably High Magnetic Rare Earth Oxide (MREO) content that include the in-demand permanent magnetic metals of **Neodymium (Nd)** and **Praseodymium (Pr)**, which were encountered during the drill program and run as high as 43% of the Total Rare Earth Oxide F/Note1 (TREO) grade.

Significant intersections from reconnaissance drill program included:

- **12 metres @ 614ppm TREO** from 26 meters down hole (hole 23LRAC001).
- **3 metres @ 919ppm TREO** from 23 meters down hole (hole 23LRAC002).
 - including 1 metre @ 1,878ppm TREO.
- **4 metres @ 654ppm TREO** from 25 meters down hole (hole 23LRAC004)
- **6 metres @ 900ppm TREO** from 18 meters down hole (hole 23LRAC005).
 - including 1 metre @ 1,815ppm TREO and 1 metre @ 1,103ppm TREO.
- **5 metres @ 591ppm TREO** from 13 meters down hole (hole 23LRAC009).
 - including 1 metre @ 1,042ppm TREO.
- **8 metres @ 395ppm TREO** from 9 meters down hole (hole 23LRAC014).
- **9 metres @ 398ppm TREO** from 4 meters down hole (hole 23LRAC016).
- Review of other specialty metals/elements from results is currently being assessed.

To put these grades into some context, Ionic Rare Earths (ASX:IXR with an approximate market capitalisation of A\$90 million), who appears to be one of the more advanced clay hosted REE developers listed on the ASX (with a Mineral Resource Estimate of 532 million tonnes @ 640ppm TREO F/note2) considers notable (or important) intersections being that are 4 metres or greater in thickness and/or grade above 600ppm TREO F/note3.

Adopting Ionic Rare Earths' classification, seven (7) of the sixteen (16) first pass reconnaissance scale air core holes drilled by Terrain across its Lort River tenement area successfully returned "notable intersections" for rare earth mineralisation.

This is an impressive hit rate for Terrain considering that the drill holes are separated by approximately three (3) kilometres and that the drilling was limited to roadside verges. (The Company could only drill where there were public roads and not, necessarily, where the highest priority REE targets are interpreted to be located).

Address: Suite 2, 28 Outram Street, West Perth WA 6005 **Postal:** PO Box 79, West Perth, WA 6872

Foot notes from page one:

¹ Total Rare Earth Oxide (REO) is the industry accepted form for reporting rare earth metals and is calculated by TREO (Total Rare Earth Oxide) = La₂O₃ + CeO₂ + Pr₂O₃ + Nd₂O₃ + Sm₂O₃ + Eu₂O₃ + Gd₂O₃ + Tb₂O₃ + Dy₂O₃ + Ho₂O₃ + Er₂O₃ + Tm₂O₃ + Yb₂O₃ + Lu₂O₃ + Y₂O₃. See the "Verification of sampling and assaying" section of the JORC Table accompanying this report for additional information relating to TREO.

² See Ionic Rare Earths' ASX announcement of 3 May 2022 for full details of the Mineral Resource Estimate of their 51% owned Makuutu Rare Earth Deposit located in Uganda [02517527.pdf \(weblink.com.au\)](#)

³ Based on IXR's ASX announcements. See Ionic Rare Earths' ASX announcement of 5 December 2020 as evidence of their position with respect to "notable intersections" 02305078.pdf (weblink.com.au)

The high percentage of Magnetic Rare Earth Oxide (as a function of the overall TREO grade) together with the notable thickness and/or grade of the rare earth element mineralisation returned from this reconnaissance scale roadside drilling program makes the Lort River Project, in Terrain's eyes, a highly prospective (and valuable) project and will be one of the core projects around which Terrain aims to build its exploration success going forward.

Consequently, the Company is continuing conversations with the relevant landowners across the Lort River project area in relation to a targeted (and staged) exploration drilling campaign commencing in January 2024, that is designed to culminate in the release of a JORC Exploration Target¹ by the start of the second quarter of 2024.

Diagram 1: Location of Terrain Mineral's 100% owned Lort River Rare Earths Project within the highly prospective Esperance region of Western Australia. The majority of the Company's 320 square kilometre Lort River tenement package encompasses privately owned (third party) freehold land, used for cropping and other agricultural activities.

¹ Exploration Targets are conceptual in nature but are based on reasonable grounds and assumptions. Exploration Targets have insufficient exploration data to allow an estimate a Mineral Resource and there is no certainty that an Exploration Target will result in any future estimation of a Mineral Resource.

Diagram 2: Collar location map for Terrain Minerals' August 2023 first pass, reconnaissance scale air core drill program, whose results the subject of this release (refer to picture 1).

ABOUT TERRAIN MINERALS LIMITED:

Terrain Minerals Limited (ASX: TMX) is a mineral exploration company with a Western Australian based asset portfolio consisting of:

Trade Opportunities: Terrain is always open to commercial discussions of full/partial sales and or JV of assets.

Lort River – WA Rare Earth Elements Exploration Project 100% owned. Covering 320km² of highly prospective exploration acreage for REE within the now tightly held and emerging southern Esperance clay hosted REE province of Western Australia. Terrain has recently executed a roadside air core drilling program. Drill results are pending. The Company's Lort River Project immediately adjoins Meeka Metals Limited's (ASX: MEK) Cascade REE Project and OD6 Metals Limited's (ASX: OD6) Grass Patch REE Project.

Smokebush (SB): 100% owned gold, copper gallium and lithium exploration project located within the prospective Yalgoo Mineral Field of Western Australia. The Company's Smokebush Project neighbours Warriedar Resources Limited's (ASX: WA8) (formally Minjar, Golden Dragon Project), The Company's exploration campaigns are targeting both gold, lithium, and new Copper/Ni targets across the tenement package:

- **SB - Gold IP Survey** – IP survey program identified multiple drill targets, now drill tested with results pending – expected late October 2023.
- **SB - Lithium** - 20+ pegmatites identified, ranging up 20m wide and up to 200m long before appearing to go under cover. The pegmatite swarms run along a 4 km long zone with the most prospective targets around the Monza and Hurly areas. Results expected late October 2023.
- **SB - Larin's Lane** – MMI soil sampling results have identified potential polymetallic drill targets. Refer to above ASX realise on the 18 October 2023. Targeting maiden drill program in November 2023.

Wild Viper Project: 100% owned gold exploration project, located 70 kilometres north of Leonora, Western Australia, and incorporates the strategic land holding known as Wilsons Patch. The Company's Wild Viper Project is strategically located and surrounds Red5 Limited's (ASX: RED) Great Western Mine as well as being adjacent to Northern Star Resources Limited's (ASX: NST) Bundarra gold deposits.

Project Review: Terrain Minerals Limited continues to investigate potential projects across various commodities including gold, copper, nickel, rare earth elements, and other industrial minerals. Western Australian based projects are the Company's current focus, but other parts of Australia are being seriously examined and considered as are other jurisdictions like Africa, Europe, and the Americas. Several Canadian Lithium opportunities are currently being reviewed.

Pending Applications: Terrain has several pending tenement (packages) applications across Western Australian and now Queensland. These applications include:

- **Biloela Copper & Gold Project** located along strike of the Cracow Gold Mine in Qld (ASX release 21 June 2023);
- **Carlindie Lithium Project** located near Lithium Power International's Tabba Tabba Lithium Project in the Pilbara WA;
- **Mukinbudin (WA) Rare Earths and Lithium Project** which neighbours Rio Tinto's landholding in the region.

Note: The Company does not incur any holding or ongoing costs in relation to pending applications. It should be noted that there is no guarantee that pending application will be granted.

Authority

This announcement has been authorised for release by the Justin Virgin Director of Terrain Minerals Limited.

Competent Person's Statement

The information in this report that relates to Exploration Results are based on information compiled by Mr. B. Bell, who is a Member of the Australian Institute of Geoscientists and is a consultant retained by Terrain Minerals. Mr Bell is an options holder of Terrain Minerals. Mr Bell has sufficient experience which is relevant to the style of mineralisation and type of deposit under consideration and to the activity which he is undertaking to qualify as a Competent Person as defined in the 2012 Edition of the 'Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves'. Mr. Bell consents to the inclusion in the report of the matters based on his information in the form and context in which it appears.

ASX Listing Rule 14.3

In accordance with ASX Listing Rule 14.3 and its Constitution, the Company advises that valid nominations for the position of director remain open throughout the year.

Compliance Statement

The Company notes that within the announcement, all the information is referenced directly to the relevant original ASX market releases of that technical data.

Terrain Minerals would like to confirm to readers that it is not aware of any new information or data that materially affects the information included in the relevant market announcement and, in the case of the estimates of Mineral Resources, that all material assumptions and technical parameters underpinning the estimates in the relevant market announcement continue to apply and have not materially changed.

Disclaimer

Information included in this release constitutes forward looking statements. Often, but not always, forward looking statements can generally be identified by the use of forward-looking words such as "may", "will", "expect", "intend", "plan", "estimate", "anticipate", "continue" and "guidance" or other similar words, and may include, without limitation, statements regarding plans, strategies and objectives of management, anticipated production or construction commencement dates and expected costs or production outputs.

Forward looking statements inherently involve known and unknown risks, uncertainties and other factors that may cause the company's actual results, performance, and achievements to differ materially from any future results, performance or achievements. Relevant factors may include, but are not limited to, changes in commodity prices, foreign exchange fluctuations and general economic conditions, increased costs and demand for production inputs, the speculative nature of exploration and project development, including the risks of obtaining necessary licences and permits and diminishing quantities or grades of reserves, political and social risks, changes to the regulatory framework within which the company operates or may in the future operate environmental conditions including extreme weather conditions, staffing and litigation.

Forward looking statements are based on the company and its management's assumptions made in good faith relating to the financial, market, regulatory and other relevant environments that exist and effect the company's business operations in the future. Readers are cautioned not to place undue reliance on forward looking statements.

Forward looking statements are only current and relevant for the date of issue. Subject to any continuing obligations under applicable law or any relevant stock exchange listing rules, in providing this information the company does not undertake any obligation to publicly update or revise any of the forward looking statements or advise of any change in events, conditions or circumstances on which such statement is based.

JORC Code, 2012 Edition – Table 1 report template

Section 1 Sampling Techniques and Data

(Criteria in this section apply to all succeeding sections.)

Criteria	JORC Code explanation	Commentary
Sampling techniques	<ul style="list-style-type: none"> <i>Nature and quality of sampling (eg cut channels, random chips, or specific specialised industry standard measurement tools appropriate to the minerals under investigation, such as down hole gamma sondes, or handheld XRF instruments, etc). These examples should not be taken as limiting the broad meaning of sampling.</i> <i>Include reference to measures taken to ensure sample representivity and the appropriate calibration of any measurement tools or systems used.</i> <i>Aspects of the determination of mineralisation that are Material to the Public Report.</i> <i>In cases where 'industry standard' work has been done this would be relatively simple (eg 'reverse circulation drilling was used to obtain 1 m samples from which 3 kg was pulverised to produce a 30 g charge for fire assay'). In other cases more explanation may be required, such as where there is coarse gold that has inherent sampling problems. Unusual commodities or mineralisation types (eg submarine nodules) may warrant disclosure of detailed information.</i> 	<ul style="list-style-type: none"> Air core drill samples were collected at one metre intervals for analysis. No compositing of samples was undertaken. Drill holes were located using handheld GPS. Sampling was carried out using Terrain Minerals' protocols and QA/QC procedures as per current industry practice. Air core drilling was used to obtain one metre samples, collected through a splitter into buckets and placed in rows for geological logging. Samples were submitted to Company's preferred (and independently certified) laboratory in Perth, Western Australia on Friday 25 August 2023 where they will be dried (ALS code DRY-21), crushed (ALS code CRU-32) and pulverised (ALS code PUL-21) before being analysed using ME-MS89 (for rare earths) and Au-ICP21 (for gold). Rare Earth Elements (REE) analysis: Lithium borate fusion with ICP-MS (ALS code ME-MS89) which, according to the laboratory, enables complete analysis when the targeted elements are the suite of rare earth elements including the light rare earth elements of Lanthanum, Cerium, Praseodymium, Neodymium and Samarium and the heavy rare earths elements Europium, Gadolinium, Terbium, Dysprosium, Holmium, Erbium, Thulium, Ytterbium, Lutetium and Yttrium. Analysis method ME-MS89 also analysis for, amongst other things, Niobium, Tantalum, Gallium and Germanium. See Fusion decomposition (alsglobal.com) for more details on fusion digestion with ICP-MS analysis being used by the Company to analyse the samples referred to in this release. The Company may also utilise four acid digestion method (ALS code ME-MS61) in addition to (or instead of ME-MS89) during its exploration drilling programs when a lower detection limit or a different suite of trace-elements is required. Gold analysis: Fire assay of 25-gram samples aliquots (ALS code Au-ICP21). See Gold by fire assay (alsglobal.com) a for more details the fire assay analysis being used by the Company on these samples.
Drilling techniques	<ul style="list-style-type: none"> <i>Drill type (eg core, reverse circulation, open-hole hammer, rotary air blast, auger, Bangka, sonic, etc) and details (eg core diameter, triple or standard tube, depth of diamond tails, face-sampling bit or other type, whether core is oriented and if so, by what method, etc).</i> 	<ul style="list-style-type: none"> The type of drilling used for this program was air core. The drilling contractor was Raglan Drilling, using a standard air core rod string and blade drill bit.
Drill sample recovery	<ul style="list-style-type: none"> <i>Method of recording and assessing core and chip sample recoveries and results assessed.</i> <i>Measures taken to maximise sample recovery and ensure representative nature of the samples.</i> 	<ul style="list-style-type: none"> The drill cyclone was cleaned at the end of each hole in the effort to minimise the risk of contamination. The volume of sample collected for analysis per sample is representative of each one metre interval.

Criteria	JORC Code explanation	Commentary
	<ul style="list-style-type: none"> Whether a relationship exists between sample recovery and grade and whether sample bias may have occurred due to preferential loss/gain of fine/coarse material. 	<ul style="list-style-type: none"> The weight of each sample was recorded by the Company's preferred (and independently certified) laboratory in Perth prior to analysis. There is no apparent relationship between sample recovery and grade.
<i>Logging</i>	<ul style="list-style-type: none"> Whether core and chip samples have been geologically and geotechnically logged to a level of detail to support appropriate Mineral Resource estimation, mining studies and metallurgical studies. Whether logging is qualitative or quantitative in nature. Core (or costean, channel, etc) photography. The total length and percentage of the relevant intersections logged. 	<ul style="list-style-type: none"> All holes were logged geologically by Company geologists using Terrain Minerals' logging codes. Logging is both qualitative and quantitative by nature, and may include lithology, mineralogy, mineralisation, weathering and colour. All drill holes were logged in full. In relation to any disclosure of, or reference to, interpreted visual mineralisation, the Company cautions that visual estimates of mineral abundance should never be considered a proxy or substitute for laboratory analysis. Laboratory assay results are required to determine the widths and grade of the visual mineralization (if reported) in preliminary geological logging. The Company will update the market when laboratory analytical results become available. In relation to any disclosure of, or reference to, clay zones (or similar) within this release, the Company cautions that the presence of clay zones above fresh bedrock is a very common occurrence across Australia and is in no way indicative of the presence of ionic (or clay hosted) rare earth elements or any other form of mineralisation. Rather, clay zones are simply a natural part of the weathering process of Australia's geology and its presence should be considered typical (or normal) for most parts of Australia. (see Welcome : CRC LEME for additional information)
<i>Sub-sampling techniques and sample preparation</i>	<ul style="list-style-type: none"> If core, whether cut or sawn and whether quarter, half or all core taken. If non-core, whether riffled, tube sampled, rotary split, etc and whether sampled wet or dry. For all sample types, the nature, quality and appropriateness of the sample preparation technique. Quality control procedures adopted for all sub-sampling stages to maximise representivity of samples. Measures taken to ensure that the sampling is representative of the <i>in situ</i> material collected, including for instance results for field duplicate/second-half sampling. Whether sample sizes are appropriate to the grain size of the material being sampled. 	<ul style="list-style-type: none"> Air core drill samples were collected at individual one metre intervals down the entire length of each hole. No compositing of samples was undertaken. Each sample from this air core drill program was split using a cone splitter, incorporated as part of the drill rig's cyclone. Each one metre drill sample was pulverized to 75um by Company's preferred (and independently certified) laboratory prior to analysis, which is the industry's standard protocol when assaying air core drill samples. Certified Reference Material (CRM, or 'standards') were routinely included in the one metre sampling sequence. The sample size is considered appropriate for the grain size of sampled material.
<i>Quality of assay data and laboratory tests</i>	<ul style="list-style-type: none"> The nature, quality and appropriateness of the assaying and laboratory procedures used and whether the technique is considered partial or total. For geophysical tools, spectrometers, handheld XRF instruments, etc, the parameters used in determining the analysis including instrument make and model, reading times, calibrations factors applied and their derivation, etc. Nature of quality control procedures adopted (eg standards, blanks, duplicates, external laboratory checks) and whether acceptable levels of accuracy (ie lack of bias) and precision have been established. 	<ul style="list-style-type: none"> Samples were submitted to Company's preferred (and independently certified) laboratory in Perth, Western Australia on Friday 25 August 2023 where they will be dried (ALS code DRY-21), crushed (ALS code CRU-32) and pulverised (ALS code PUL-21) before being analysed using ME-MS89 (for rare earths) and Au-ICP21 (for gold). Rare Earth Elements (REE) analysis: Lithium borate fusion with ICP-MS (ALS code ME-MS89) which, according to the laboratory, enables complete analysis when the targeted elements are the suite of rare earth elements including the light rare earth elements of Lanthanum, Cerium, Praseodymium, Neodymium and Samarium and the heavy rare earths elements Europium,

	<i>should be assessed and reported if material.</i>	lithologies.
<i>Sample security</i>	<ul style="list-style-type: none"> <i>The measures taken to ensure sample security.</i> 	<ul style="list-style-type: none"> Samples are given individual sample numbers for tracking. The sample chain of custody is overseen by the geologist in charge of the program. Samples were transported in sealed bags to the Company's preferred (and independently certified) laboratory in Perth, Western Australia by the geologist in charge of the program.
<i>Audits or reviews</i>	<ul style="list-style-type: none"> <i>The results of any audits or reviews of sampling techniques and data.</i> 	<ul style="list-style-type: none"> The sampling techniques and analytical data are monitored by the Company's geologists. An external review of the assay data provided by the Company's preferred (and independently certified) laboratory has been completed by Expedio (see Expedio Services), who did not raise any issues or concerns in relation to the data.

Section 2 Reporting of Exploration Results

(Criteria listed in the preceding section also apply to this section.)

Criteria	JORC Code explanation	Commentary
<i>Mineral tenement and land tenure status</i>	<ul style="list-style-type: none"> <i>Type, reference name/number, location and ownership including agreements or material issues with third parties such as joint ventures, partnerships, overriding royalties, native title interests, historical sites, wilderness or national park and environmental settings.</i> <i>The security of the tenure held at the time of reporting along with any known impediments to obtaining a licence to operate in the area.</i> 	<ul style="list-style-type: none"> The exploration results referenced in this release are from the Western Australian tenements of E63/2207, E63/2208 and E63/2209, located approximately 50 kilometers northwest of Esperance. See Terrain Minerals » Projects » Lort River Project - Rare Earths (REE) These tenements are 100% held and operated by Terrain Minerals Limited. There are no known material issues with third parties in relation to these tenements. The tenements are in good standing with no known impediments to exploration. 

Criteria	JORC Code explanation	Commentary
<i>Exploration done by other parties</i>	<ul style="list-style-type: none"> <i>Acknowledgment and appraisal of exploration by other parties.</i> 	<ul style="list-style-type: none"> The historic exploration across the Company's Lort River Project is summarised, acknowledged and appraised in the Company's ASX announcement dated 30 May 2022 (see http://terrainminerals.com.au/upload/documents/InvestorRelations Releases/20220530DraftLortRiverREEReviewJVfinalSN.pdf) The Company is unaware of any additional exploration beyond that described in its 30 May 2022 ASX announcement.
<i>Geology</i>	<ul style="list-style-type: none"> <i>Deposit type, geological setting and style of mineralisation.</i> 	<ul style="list-style-type: none"> The Company's working thesis is that a zone of potential rare earth element (REE) enrichment has occurred within the regolith after weathering of REE mineralised felsic bedrock (felsic gneiss after granite). See Rare Earth Element Accumulation Processes Resulting in High-Value Metal Enrichments in Regolith U.S. Geological Survey (usgs.gov) for a more detailed explanation and discussion on the clay hosted rare earth elements deposits (also known as ion adsorption clay rare earth element deposits)
<i>Drill hole Information</i>	<ul style="list-style-type: none"> <i>A summary of all information material to the understanding of the exploration results including a tabulation of the following information for all Material drill holes:</i> <ul style="list-style-type: none"> <i>easting and northing of the drill hole collar</i> <i>elevation or RL (Reduced Level – elevation above sea level in metres) of the drill hole collar</i> <i>dip and azimuth of the hole</i> <i>down hole length and interception depth</i> <i>hole length.</i> <i>If the exclusion of this information is justified on the basis that the information is not Material and this exclusion does not detract from the understanding of the report, the Competent Person should clearly explain why this is the case.</i> 	<ul style="list-style-type: none"> See Table 1 within this release.
<i>Data aggregation methods</i>	<ul style="list-style-type: none"> <i>In reporting Exploration Results, weighting averaging techniques, maximum and/or minimum grade truncations (eg cutting of high grades) and cut-off grades are usually Material and should be stated.</i> <i>Where aggregate intercepts incorporate short lengths of high grade results and longer lengths of low grade results, the procedure used for such aggregation should be stated and some typical examples of such aggregations should be shown in detail.</i> <i>The assumptions used for any reporting of metal equivalent values should be clearly stated.</i> 	<ul style="list-style-type: none"> No cutting of grades has been undertaken. Data has been aggregated according to downhole intercept lengths above the lower cut-off grade. A lower cut-off grade of 300ppm total rare earth oxide (TREO) has been applied. Terrain Minerals considers this to be an appropriate cut-off grade for exploration data in a clay hosted REE project. Multi-element results (REE) are converted to stoichiometric oxide (REO) using element-to-stoichiometric conversion factors.

Element	Conversion Factor	Oxide form
Ce	1.1713	CeO ₂

These element-to-stoichiometric conversion factors used by Terrain Minerals (as shown in the above table) are in line with that report by James Cook University (amongst others.) See Advanced Analytical Centre - Element-to-stoichiometric oxide conversion factors - JCU Australia				
<i>Relationship between mineralisation widths and intercept lengths</i>	<ul style="list-style-type: none"> These relationships are particularly important in the reporting of Exploration Results. If the geometry of the mineralisation with respect to the drill hole angle is known, its nature should be reported. If it is not known and only the down hole lengths are reported, there should be a clear statement to this effect (eg 'down hole length, true width not known'). 	<ul style="list-style-type: none"> Rare Earth Oxide (REO) is the industry accepted form for reporting rare earths metals. The following calculations are used for compiling REO into their reporting and evaluation groups: TREO (Total Rare Earth Oxide) = La₂O₃ + CeO₂ + Pr₂O₃ + Nd₂O₃ + Sm₂O₃ + Eu₂O₃ + Gd₂O₃ + Tb₄O₇ + Dy₂O₃ + Ho₂O₃ + Er₂O₃ + Tm₂O₃ + Yb₂O₃ + Lu₂O₃ + Y₂O₃. LREO (Light Rare Earth Oxide) = La₂O₃ + CeO₂ + Pr₂O₃ + Nd₂O₃ + Sm₂O₃ + Eu₂O₃ + Gd₂O₃ HREO (Heavy Rare Earth Oxide) = Tb₄O₇ + Dy₂O₃ + Ho₂O₃ + Er₂O₃ + Tm₂O₃ + Yb₂O₃ + Lu₂O₃ + Y₂O₃. MREO (Magnetic Rare Earth Oxide) = Pr₂O₃ + Nd₂O₃ + Gd₂O₃ + Tb₄O₇ + Dy₂O₃ + Ho₂O₃ + Sm₂O₃ 		
		<ul style="list-style-type: none"> The precise orientation / geometry of the mineralization at Lort River is unknown but is interpreted to be horizontal to sub-horizontal. The air core holes reported within the release were drilled vertically and, thus, are considered to be orthogonal to the generally flat to shallow dipping clay mineralisation. As such, the drill widths reported in this release is approximately true widths. 		

Criteria	JORC Code explanation	Commentary
Diagrams	<ul style="list-style-type: none"> Appropriate maps and sections (with scales) and tabulations of intercepts should be included for any significant discovery being reported. These should include, but not be limited to a plan view of drill hole collar locations and appropriate sectional views. 	<ul style="list-style-type: none"> The appropriate exploration maps and sections have been included within the main body of this release.
Balanced reporting	<ul style="list-style-type: none"> Where comprehensive reporting of all Exploration Results is not practicable, representative reporting of both low and high grades and/or widths should be practised to avoid misleading reporting of Exploration Results. 	<ul style="list-style-type: none"> All drill hole results have been reported within this release, including where no significant intersections were recorded.
Other substantive exploration data	<ul style="list-style-type: none"> Other exploration data, if meaningful and material, should be reported including (but not limited to): geological observations; geophysical survey results; geochemical survey results; bulk samples – size and method of treatment; metallurgical test results; bulk density, groundwater, geotechnical and rock characteristics; potential deleterious or contaminating substances. 	<ul style="list-style-type: none"> All relevant exploration data has been included within this release.
Further work	<ul style="list-style-type: none"> The nature and scale of planned further work (eg tests for lateral extensions or depth extensions or large-scale step-out drilling). Diagrams clearly highlighting the areas of possible extensions, including the main geological interpretations and future drilling areas, provided this information is not commercially sensitive.\ 	<ul style="list-style-type: none"> Encouraged by the assay results returned from the Company's maiden reconnaissance air core drilling program at its 100% owned Lort River Project, Terrain Minerals may seek to undertake additional wide space air core drilling across its Lort River tenement package. The details of any follow-up drill program, including the relevant maps and images, will be released by Terrain Minerals via the ASX Market Announcement Platform (MAP) prior to the commencement of drilling. Further work may also include the acquisition of high-resolution geophysical data and aerial drone imagery to assist geological interpretation and target generation.
