Perth: 31 October 2013

EM SURVEY AT MT ANDREW PROJECT, FRASER RANGE WA

- **Ground-based EM survey to commence 1 November 2013**

Following on from the announcement dated 29 October 2013, Platypus Minerals Ltd (“Platypus” or “Company”) is now pleased to confirm the scheduled commencement of a ground-based EM survey over three selected targets at the Mt Andrew project.

The surface fixed loop EM survey is scheduled to commence on Friday 1st November to follow up on three selected anomalies identified by the VTEMmax survey completed earlier this year over the NW corner of the Mt Andrew project. The EM survey is being managed by contractor Newexco and has been designed to confirm and more accurately locate the position and spatial orientation of the three potential conductors. If no delays are experienced, results are expected late next week.

A Program of Works for drill testing these three conductors has been submitted to the Department of Mines and Petroleum and is awaiting approval. A heritage survey for drilling clearance is scheduled for mid November with drilling to commence thereafter once all approvals have been received.

Platypus will advise the market as further news comes to hand.
